Siddhant Pandey

Bengaluru, India | pandeysiddhant85@gmail.com | +91 8840115912 | LinkedIn: www.linkedin.com/in/spandey1234

Professional Summary

Data Engineer experienced in designing and developing scalable data solutions on Microsoft Azure. Expertise in building data pipelines using Azure Databricks, Azure Data Factory, and Apache Spark. Skilled in Python, Scala, and SQL with a strong foundation in big data analytics, data warehousing, and CI/CD automation. Passionate about using Generative AI and automation tools to enhance productivity and streamline workflow

Skills

Languages: Python, Pyspark, SQL, Spark SQL, Scala
Frameworks & Tools: Apache Spark, Cucumber Framework, Pytest, SSMS
Platforms & services: Databricks, Azure Data Lake Gen2, Azure Blob, Azure Data Factory, Unity Catalog, Active Directory, Azure SQL DB, Azure Key Vault, Private End points.

Project Management: Atlassian Jira, Confluence, Bitbucket, Git Hub
Other Skills: ETL/ELT, Data Warehousing, CI/CD Pipelines, Data Engineering, Event Hubs, Rest API, Git Hub Actions.

Experience

Data Engineer, HALEON – Bengaluru, India
Sept 2025 - present

- Developed data ingestion pipelines in **Azure Data Factory**
- Ingested data from **SAP BW/4HANA** into **Azure Data Lake** (ADLS Gen2).
- Created and managed Databricks **Unity Catalog** tables.
- Optimized data pipelines and processing to improve performance and reduce storage.
- Worked on and maintained **GitHub Actions CI/CD** workflows for automated deployments.
- Worked with Azure Data Factory, Azure Databricks, Azure Storage Account, Azure Key Vault, and Azure SQL Database.
- Migrated data from Azure SQL Database to Databricks Unity Catalog.
- Developed Databricks notebooks for data processing and transformation.
- Worked on the DPE Frameworks (Source to Raw, Raw to Sanitize, Data Retention).

Data Engineer, Tata Consultancy Services – Bengaluru, India
June 2022 – Sept 2025

- Developed and optimized scalable data pipelines using **Azure Databricks** and **ADF**, integrating with **ADLS Gen2** and **Blob Storage** for secure, high-performance data storage.
- Built **Databricks notebooks** in **Pyspark, Python**, **Scala**, and **SQL** for data transformation, implementing retry logic and monitoring—**improving fault tolerance by 60%** and **reducing pipeline failures by 30%**.
- Orchestrated **ADF** workflows with error handling and alerting to ensure pipeline reliability and minimal downtime.
- Applied **Spark** optimization techniques for efficient big data processing.
- Enforced **RBAC (Role-Based Access Control)** to manage secure access to data.
- Automated deployments via **Jenkins CI/CD pipelines** integrated with **Git**, ensuring consistent code delivery.
- Used **Cucumber** for testing pipeline components and **Generative AI tools** to reduce manual effort and faster delivery.

Intern, Tata Consultancy Services
Feb 2022 – May 2022

- Developed a CI/CD pipeline to deploy a Spring Boot application using the **Azure DevOps** portal to **Azure App Service**.
- Automated the deployment process using **Jenkins**, implementing CI/CD for efficient and reliable releases.
- Utilized **Terraform** to define and provision the underlying cloud infrastructure required for application deployment, enabling consistent and repeatable environment setup.

Education

PSIT College of Engineering, Kanpur
Bachelor of Engineering (B.E.) – Electronics & Communication Engineering
2018 - 2022

Additional Projects

- Developed a solution to programmatically manage **Azure Data Factory** resources from **Databricks** notebooks using REST APIs. Authenticated via SPN using MSAL and used **JSON** payloads to create and control pipelines, triggers, and other components. This eliminated the need for ADF UI, significantly streamlining automation, enabling faster deployments, and improving operational efficiency.
- Designed and implemented **ETL** pipeline to retrieve weather data for multiple cities using Open Google Weather APIs on the **Databricks** platform. Stored the collected data in structured tables and built streaming pipelines to enable continuous updates, ensuring near real-time weather data availability for further analysis and visualization.

Achievements

- Databricks Certified: Data Engineer Associate
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
